Focuses on Qualitative Delivery

Solution Architecture is a system which provides technical expertise, helps achieve business goals and integration information. It is intended to address the business needs and define the scope of solution requirements. Lockhart Consulting Group's Solution Architects provide a support system for reference and software solution helps achieve the qualitative output as a blueprint to business functionalities and its requirements. Software development solutions built by following best practices always utilizes a Solution Architecture.

Solution Architecture helps keep the development team aware and keeps track of project progress. It identifies and defines areas like performance, security, and quality of solution which in turn helps in foreseeing the solution. And thus, aids in scope of improving the solution quality.

Helps in Planning the Project Lifecycle

In the initial stage, when planning the implementation of the software solution, the support offered by Lockhart Consulting's Solution Architects provides invaluable experience as it identifies areas for the implementation phase. Lockhart Consulting considers many disciplines where they can provide insights on design and process of implementation of each module of the project lifecycle. Also, Lockhart Consulting assists the software development experts to stick to the plan of implementation. Lockhart Consulting supports project planning, project management, scheduling, estimation, contingency management and also scales performance.

Solution Architecture is the Support System

Solution Architecture is considered part of best practices in Software Development by IT Consulting Companies. Additionally, software development experts always ensure that they do not begin development without having a Solution Architecture.
